CRYPTO TRADING FUND

The **Crypto Trading Fund (CTF)** is a **global trading fund** that requires an international base currency. **WE** use **Bitcoin**, regularly acknowledged as **digital gold**.

WE permit **investor's** to deposit **Bitcoin** into their **account** on a well-known **exchange (BitMEX)** and provide **US** with their **API** without **Withdrawal Permission** from which our **trader's** use to **trade** on the **cryptocurrency market** which is similar to the **foreign exchange market**.

Our principal **trading** pair is **BTC/USD**, all **buying** and **selling** occur at our **trading desk** intending to return a **profit** for all **investors**. Many **Bitcoin investor's** and **trader's** lack the **essential sources** to habits applicable lookup on the **burgeoning digital asset**.

Our trading fund was developed to **remedy** this very **problem**; honestly **trust** our **trading fund** with your **Bitcoin holdings** and **WE** will professionally **invest** and **exchange** your **capital** among **several assets**.

The **trading fund** is constantly **managed** and new **coins** are continuously being **researched** to supply **buyers** with the **best** viable **returns** on their **capital**. Our **Fund** favours **blockchain** initiatives and there are nonetheless masses of activity in the complete disruption of the ancient **financial** system.

OUR MINIMUM CAPITAL RETURNS PER YEAR is 40%

**INVESTOR
PROPOSAL**

CRYPTO TRADING FUND

WE trade **investor's** funds through several **positions**, in both **long** and **short** strategies. **Trading desk**, the place where **WE** make **trades** in a variety of **BTC** to **Fiat**, and **ETH** to **Fiat** pairings. These **pairings** have been **chosen** for their **projected returns**, from those digital properties which show each traditionally **excessive** overall **performance** and **robust** workable future **gains**. Likewise, our **analysts/traders** have **chosen** these **pairs** with a **low-risk** profile to **maximize returns**.

WE don't **accept** or **store** your **funds** on our **accounts**. Our **trader's** **work** with **your** account **API's** all the time.

Our trading **strategy** is based on our **analysis** which is based on proven **algorithms** that work on **minimizing risks** and **aims** for **long term profitability**, by taking the **best** opportunities, and **automatically** locking **profits**.

The **investors** only have to **register** on **BitMEX** using our **affiliate** link and provide **US** with their **API** without the **Withdrawal** function. From then on, as **soon** as our **traders** identify a **profitable** opportunity; orders will be **automatically** executed on the **investor's** account. **WE** only require **order** access; **WE** will never **request** withdrawal permissions to your trading **account**. **WE** recommend **you** don't **create** new or modify existing **orders** in your **BitMEX** account that is **provided** to **US**.

**INVESTOR
PROPOSAL**

CRYPTO TRADING FUND

WE charge **5%** of your **Invested Capital** as a **security** fee **beforehand** which will be given **back** once you **Exit** the **Fund**. This **Fee** is to make sure **WE** are **able** to **Grow** Your **Bitcoins** for a **Long** Term. Our **trading fund** is purely **focused** on making **profits** from your **Bitcoin** Holdings, only then **WE** make **profits** for **US**. This makes **US** financially **incentivized** to supply **returns** on your **capital**.

P&L CALCULATIONS

WE calculate all profits in **Bitcoin**, which means that after your **Bitcoin** is **deposited** into our **affiliated BitMEX** account, **WE** aim to **grow** that **amount** of **Bitcoin**. For example, if you **deposit 1 BTC**, our **mandate** would be to **amplify** that **amount** to **1.1 - 1.2 BTC** by way of **buying** and **selling**. As with any **investing** activity, **losses** are also **viable** in the **trading fund**. When **losses** occur, the **price** of the **losses** will be **disbursed** among **investor's** proportional to their **respective** degrees of **investment** in the **trading fund**. Such **losses** will then be **identically** updated in your **account** as the **profits**.

All **profits** will be **split** at a ratio of **3:7**, **WE** take **30%** and the investor (**you**) take **70%**.

Suppose an investor deposits **1 BTC** on a set **date 1** and the total **profit** generated from that **1 BTC** investment equals **1.3 BTC** as at set **date 2**. In this case, the **investor** would be **left** with an updated **balance** of **1.21 BTC** after they **share** the **30%** profit fees (**0.09 BTC**) with **US**.

DISCLAIMER

WE are right here to make **investments** and alternate **digital property** on your **behalf** because when you **profit**, **WE** profit with **you**. You have to be **conscious** of the **dangers** and take **delivery** of these **dangers**. Furthermore, **WE** operate on one of the most **secure** cryptocurrency **exchange** in the **world** using your **API**. Finally, **WE** are a **trading fund** that sees daily **adjustments** in both **directions**. This capacity that your **BTC** may also **develop** on some days and **decline** on others. This is **fundamental** to **understand** earlier than **getting** into the **trading fund** as **losses** do appear even although **WE** have been **profitable** since the **beginning** of our **trading fund**.
